

Date: 10/13/83
 Time: 7:30 P.M.
 Place: Clear Lake Park
 Program: NASA Shuttle Film

PRES. CORNER

I have checked with Clear Lake Park management and they say we are a GO for the Oct. 13 meeting. So barring some unknown event, election of officers is scheduled to take place. You all know the rules - check with the individual you wish to nominate to see if he is willing. One gentle reminder, our annual Scale Fly-in is Oct. 15th and 16th. A modest 5.00 entry fee will let you enter as many planes as you wish. We need participants, workers and

spectators to make this a great event. Out of 125 members we should expect at least 20-25 club members to enter something, get out of the wood work you people and participate in club activities. This has been a good contest in the past, lets make it better this year. The annual auction has been reset for the NOVEMBER MEETING. I will let the new officers set the details to suit them.

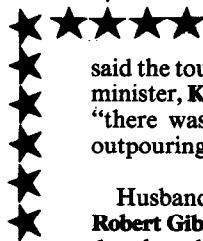

DAVE

EDITORIAL COMMENT

As it has happened in years past, the annual "UN CONTEST" is upon us and as in years past, we will probably see the same faces appear on the flight and display lines. In the few short years, I have been with the club, I vaguely remember a few people being added to the club roster. And so the question is: Have the "Old Timers" become complacent and do the newer members lack initiative to participate in club activities? If this is the case -- WHY --?

KEEP YOUR COOL

HOOT

said the tourist haven's first prime minister, **Kennedy Simmonds**, 47, "there was a hush and then an outpouring of joy."

Husband-and-wife astronauts **Robert Gibson** and **Dr. Rhea Seddon** shared a light moment together during a zero-gravity training flight high above the Johnson Space Center in Houston. Though Seddon, a trained surgeon who served her residency in Memphis, Tenn., only appears to be hoisting her temporarily weightless husband, she has found working for NASA to be a truly uplifting experience. "I don't think a day goes by when I don't learn 10 new things," says Seddon, 35, who is preparing for a shuttle flight next June. That will make the couple's 14-month-old son, Paul, the first toddler in the world with two truly space-age parents—Dad, 36, is scheduled to pilot the shuttle Challenger in January.
